

Crop Report

Report name: Paringa Crop report
 Report date: 17/09/2010
 Last climate date available: 15/09/2010
 Client name: MSF
 Paddock name: Paringa Mildslope
 Report generated by: MSF
 Date sown: 08-May
 Crop type: Wheat
 Variety sown: Gladius
 Sowing density: 120 plants/m²

Weather station used: Meringur (Vic.)
 Rainfall records used: Weather station
 Soil type: Sandy loam (Kerribee No359)
 Maximum rooting depth: 180 cm
 Roots constrained by EC: yes
 Stubble type: wheat
 Stubble amount: 250 kg/ha
 Start of growing season: 01-Apr
 Initial conditions date: 22-Apr
 Growing season rainfall to date: 168.2 mm
 Date of last rainfall entry: ?
 Expected harvest date: 1-Nov

Grain Yield Outcome

This graph shows the probability of exceeding a range of yield outcomes this season. It takes into account your pre-season soil moisture; the weather conditions so far; soil N and agronomic inputs. The long term record from your nominated weather station is then used to simulate what would have happened from this date on in each of the past 100 years. The yield results are used to produce this graph.

Hay Yield Outcome

This graph show the probability of exceeding a range of hay yield outcomes this season. It takes into account the same factors as the grain yield graph above. When above ground dry matter is below 2t/ha, hay yield is assumed to be 70% of dry matter, with a moisture content of 13%. When dry matter is between 2 and 12t/ha, hay yield is assumed to be between 70 and 75% of dry matter (sliding scale). When dry matter is above 12t/ha, hay yield is assumed to be between 75 and 80% (sliding scale).

Current dry matter: 5348 kg/ha

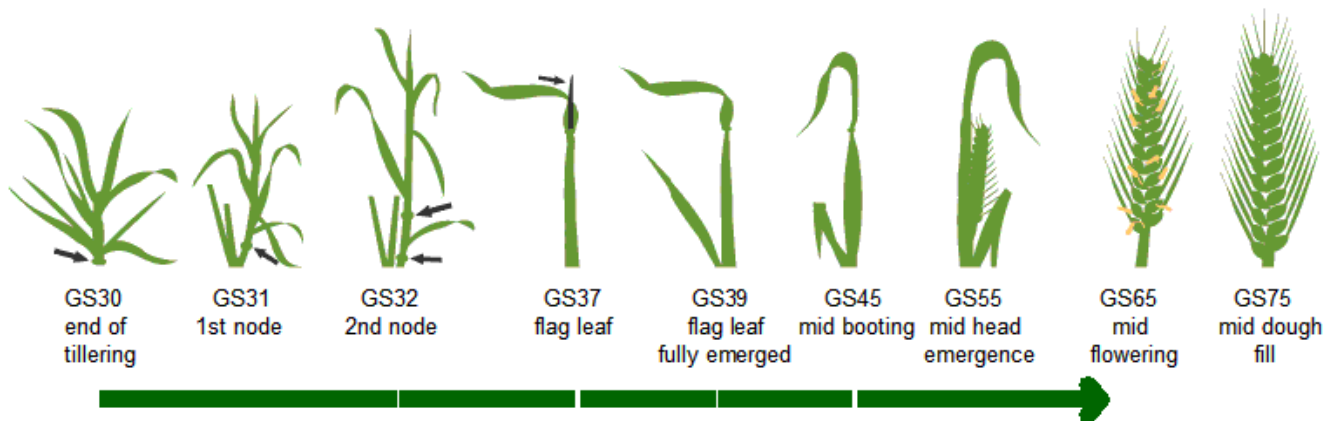

The season so far - Growing Season Rainfall Deciles

Current distribution of PAW

Water Budget

Initial PAW status @ 22-Apr	32 mm
Rainfall since 22-Apr	155.2 mm
Irrigations	: mm
	: mm
	: mm
	: mm
	: mm
	: mm
	: mm
	: mm
	: mm
	: mm
Evaporation since 22-Apr	87 mm
Transpiration since 22-Apr	63 mm
Deep drainage since 22-Apr	0 mm
Run-off since 22-Apr	0 mm

Current PAW status: 39 mm

Nitrogen Budget

Initial N status @ 22-Apr	82 kg/ha
Mineralisation since 22-Apr	-2 kg/ha
N applications	8-May: 9 kg/ha
	: kg/ha
	: kg/ha
	: kg/ha
	: kg/ha
Total N in plant	51 kg/ha
De-nitrification since 22-Apr	0 kg/ha
Leaching	0 kg/ha

Current N status: 36 kg/ha

Probability of Future Waterlogging Events

Current distribution of soil nitrogen (kg/ha)

Availability of Water to Growing Roots

Soil Nitrogen

Water Stress

Nitrogen Stress

Brief periods of mild to moderate stress do not necessarily lead to reduced yield. To see the likely impacts of additional nitrogen fertiliser rates use the Nitrogen and Nitrogen Profit reports.

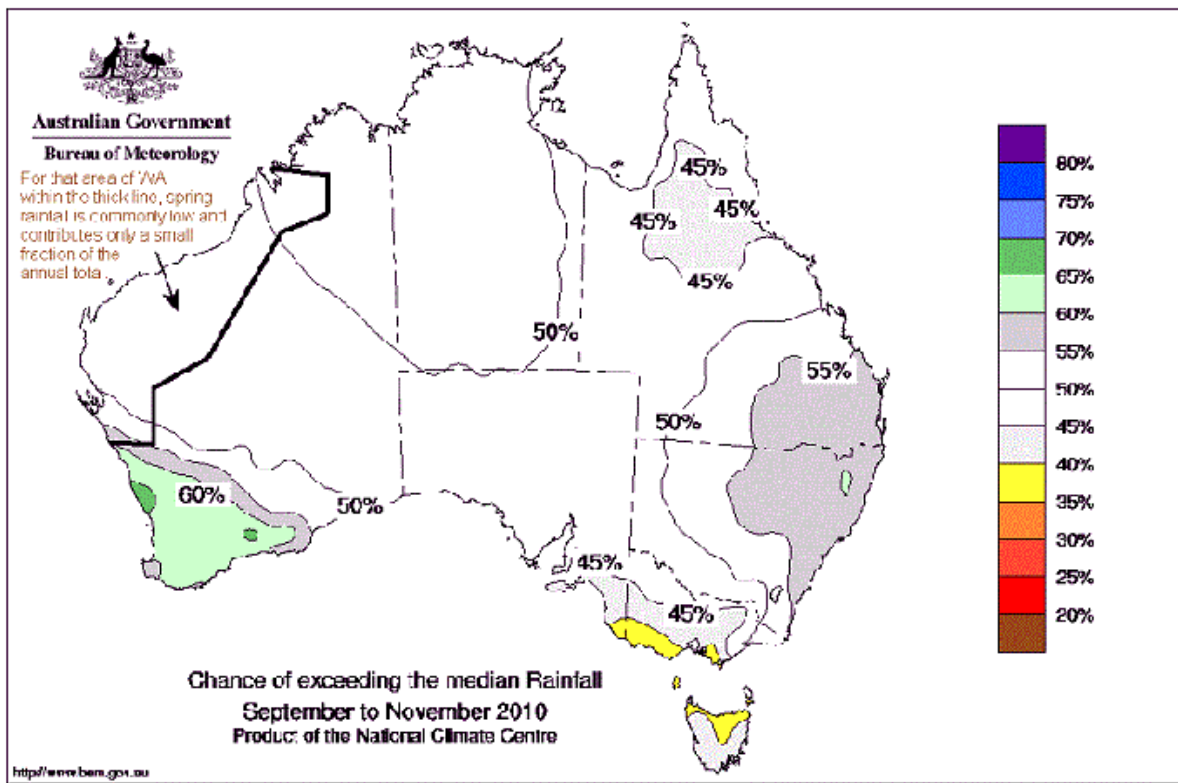

Mean projected crop performance and requirements for the next 10 days assuming no rain and no added fertiliser.

Date	Growth Stage	Evap (mm)	Daily water use (mm)	Daily N use (kg/ha)	Water available to roots above stress threshold (mm)	Water available to roots above crop lower limit (mm)	N available to roots (kg/ha)
17-Sep	65.0	0.9	1.9	0.1	6.0	32.0	18.8
18-Sep	66.2	1.0	1.7	0.1	3.5	29.5	18.8
19-Sep	66.9	1.0	1.6	0.1	1.5	27.5	18.7
20-Sep	67.6	0.9	1.5	0.1	-0.6	25.4	18.6
21-Sep	68.3	0.7	1.4	0.1	-2.5	23.5	18.5
22-Sep	69.0	0.6	1.3	0.1	-4.0	22.0	18.4
23-Sep	69.8	0.5	1.2	0.1	-5.6	20.4	18.4
24-Sep	70.5	0.5	1.1	0.1	-7.0	19.0	18.3
25-Sep	71.0	0.5	1.0	0.1	-7.7	18.3	18.2
26-Sep	71.6	0.5	1.0	0.1	-8.3	17.7	18.2

The water available to roots above the stress threshold is the amount of PAW (mm) above one third of the total water holding capacity of this soil. If the water values are below this stress threshold the water available to roots above the stress threshold will be negative.

How much rainfall can I expect?

The Bureau of Meteorology Forecast for the next 3 months

National Seasonal Rainfall Outlook: probabilities September to November 2010

Issued by the bureau of Meteorology 24th August 2010

Queensland Department of Environment and Resource Management (DERM) 3 month rainfall forecast based on the current phase of the SOI

Probability of exceeding Median Rainfall

SOI Phase and analogue years

The SOI is currently in the Positive phase. The 31 day mean SOI for August was 17.0, in July it was 18.74.

The years in history with the same SOI phase:

1892, 1893, 1900, 1909, 1910, 1915, 1916, 1917, 1920, 1924, 1938, 1947, 1950, 1955, 1956, 1958, 1960, 1973, 1974, 1975, 1981, 1988, 1996, 1998

How much rainfall can I expect?

The SOI seasonal forecast for the next 3 months.

The SOI is an index that compares the atmospheric pressure between Tahiti and Darwin. SOI Phases are determined by comparing average monthly SOI values of the past two months. Phases of the SOI have been shown to be related to rainfall variability in a range of locations in Australia and around the world.

	Rainfall
Driest	0 to 33 mm
Drier	33 to 59 mm
Average	59 to 75 mm
Wetter	75 to 96 mm
Wettest	96 to 210 mm

How do seasonal forecasts affect yield expectations?

The 31 day mean SOI for August was 17.0, in July it was 18.74.

Yield outcomes of the current SOI Phase ARE NOT significantly different from yield outcomes of all years. Significance is determined on a 90% probability threshold. (PValue=0.672)
